1. The following is an examiner's statement of reasons for allowance: Primarily, the claimed limitations of the layer of semi conducting material divided into several zones, said zones being arranged at different places on said at least two different electrode structures, and which zones are stuck on said electrode structures, and said electrode structures being in contact with a flexible support made of an insulating fabric, is not disclosed or suggested. The DE '072 Reinhold reference does not disclose the insulating fabric or the zones stuck on said electrode structures (see the English abstract of record which discloses that the insulating support is a polymer layer. A simple polymer layer is not a fabric as earlier remarks of record indicate). Similar remarks apply to claims 31 and 32 as to the stuck on element, and there is no suggestion for the polymer to be an insulating permeable support. Burgess discloses the semiconducting material stuck on electrodes 40, but the electrode structures are not disclosed as applied on and in contact with the insulating fabric, where 30 is not a fabric for reasons alluded to above, and there are no distinct zones disclosed. While 15 is a fabric, the electrode structures are not in contact with same. Fig. 9 of Hashida discloses employing semiconducting material 3 stuck on an electrode structure a1 or b1, but not on at least two a1 and b1, nor a plurality of zones on at least two electrode structures as claimed, where the claim is interpreted to require more than one zone stuck on the same at least two electrode structures. Hashida also does not disclose the fabric or insulating permeable support.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
